

What is claimed is:

1. (Original) A combination drink bottle, snack package and envelope, the combination comprising:
 - a drink bottle providing a cylindrical bottle wall joined axially with a diminished diameter bottle neck, the bottle neck terminating at a removable bottle cap; adapted
 - a sealed snack package containing a snack food, the snack package adapted for being wrapped around the bottle neck of the drink bottle for intimate abutment therewith; and
 - an envelope having a cylindrical envelope wall terminating with an aperture at one end thereof, the aperture adapted for accepting the bottle neck and for positioning an inner surface of the envelope intimately against the bottle wall for securement therewith, the envelope further enabled for pressing the snack package against the bottle neck, the envelope wall extending diametrically from the bottle wall no more than by the thickness of the envelope wall.
2. (Original) The combination of claim 1 wherein the envelope further comprises an annular cap sheath extending therewith, the cap sheath adapted for frictional engagement with the bottle cap for securing the envelope to the drink bottle.
3. (Original) The combination of claim 1 further providing an adhesive layer positioned for joining the inner surface of the envelope to the cylindrical bottle wall for sealing the envelope.
4. (Original) The combination of claim 1 further providing an adhesive strip positioned for joining the envelope wall to the cylindrical bottle wall for sealing the envelope.
5. (Original) The combination of claim 1 wherein the envelope is spirally scored so as to enable peeling the envelope away from the drink bottle.
6. (Original, Non-Elected, Reinstated) A combination drink bottle, snack package and envelope, the combination comprising:
 - a drink bottle providing a cylindrical bottle wall joined axially with a diminished diameter bottle neck, the bottle neck terminating at a removable bottle cap;
 - a sealed snack package containing a snack food, the snack package adapted for being wrapped over the bottle neck of the drink bottle for intimate abutment therewith; and
 - an envelope having a cylindrical envelope wall terminating with an aperture at one end thereof, the aperture adapted for accepting the bottle neck and for positioning an inner surface of the envelope wall intimately against the bottle wall for securement therewith, the envelope further enabled for pressing the snack package against the bottle neck, the envelope wall extending diametrically from the bottle wall no more than by the thickness of the envelope wall.

7. (Original) The combination of claim 6 further providing an adhesive layer positioned for joining the inner surface of the envelope to the cylindrical bottle wall for sealing the envelope.

8. (Original) The combination of claim 6 further providing an adhesive strip positioned for joining the envelope wall to the cylindrical bottle wall for sealing the envelope.

9. (Original, Non-Elected, Reinstated) The combination of claim 6 wherein the envelope wall is spirally scored so as to enable peeling the envelope away from the drink bottle.

10. (Currently Amended) A combination drink bottle and snack package ~~envelope~~, the combination comprising:

a drink bottle providing a cylindrical bottle wall joined axially with a diminished diameter bottle neck, the bottle neck terminating at a removal bottle cap; and,

a ~~sealed~~ snack package fabricated as an envelope adapted for having an inner wall and an outer wall having a sealable opening mounted on said outer wall for removably receiving a snack food, the snack package envelope having a cylindrical envelope outer wall joined to said inner wall, terminating with an aperture at one end thereof, the aperture adapted having a size and shape for accepting the bottle neck and removable cap and located so that under the condition of said aperture engaged with said bottle neck and cap, there is a for positioning of the an-inner outer-wall intimately against the bottle wall for securement therewith, the aperture envelope further providing a concentrically oriented cylindrical inner wall enabled for engagement with the bottle-neck-cap, the snack envelope extending diametrically from the bottle wall no more than by the thickness of the outer envelope wall thereby allowing said combination to occupy substantially the same space as a drink bottle alone.

11. (Currently Amended) The combination of claim 10 further providing an adhesive layer positioned for removably joining the inner surface of said the snack envelope to the cylindrical bottle wall ~~for sealing the envelope~~.

12. (Currently Amended) The combination of claim 10 further providing an adhesive strip positioned for joining said the snack envelope wall to said the cylindrical bottle wall for sealing said the envelope opening of said aperture.

13. (Currently Amended) The combination of claim 10 wherein the outer snack envelope wall is spirally scored so as to enable peeling said the envelope without releasing said snack food from said envelope, thereby allowing a user to remove said snack envelope away from said the drink bottle.

14. (Currently Amended) The combination of claim 10 ~~wherein the enablement further comprising a catch mounted on~~ of the inner wall of said snack package for engagement with the bottle neck, said catch fabricated in the form of ~~is an inwardly radially directed protuberance~~ protuberance.

15 (Currently amended) The combination of claim 14 wherein the ~~protuberance~~
protuberance is an annular ridge.

16. (Currently amended) The combination of claim 14 wherein the ~~protuberance~~
protuberance is a plurality of bosses.

17. (Original) The combination of claim 14 wherein the envelope has an access means positioned in opposition to the bottle cap so as to enable access to a snack food within the envelope.
